## 2011 Corn Trial of Dr. Ron Heiniger, NCSU

This Corn trial was conducted by Dr. Ron Heiniger of North Carolina State University during the 2011 growing season. Monty's Liquid Carbon was used in conjunction with existing starter programs and applied in the row on the seed.

Dr. Heiniger planted corn variety DK 68-05 on April 14<sup>th</sup> 2011, at a population of 33,000. At planting, Dr. Heiniger experimented with a 3-18-8 starter at 5 gallon/A with and without Liquid Carbon applied in the row on the seed. Dr. Heiniger even did Liquid Carbon by itself with no starter and a check plot.

Additionally, 50 gallon of 30% UAN was applied on May 24<sup>th</sup> broadcast on all plots. Plots were harvested on August 21<sup>st</sup>.
