2012 Corn Starter Trial – Real Farm Research Facility – Aurora, NE

RFR

**Starter** trial conducted to increase seed and root development and yield advantage

Real Farm Research located in Aurora, NE conducted the Corn Trial this 2012 season. The plots consisted of 4 rows, 40 ft long x 30 inches wide and replicated 4 times. Trial was irrigated by gravity, was planted at 32,000 populations.

Monty's Plant Food Company conducts trials like this, of applying our products in the row on the seed which increases germination and root development, to help determine the greatest advantage of using our products and the best timing of application. In this year's trial the 1<sup>st</sup> application provided a **7% yield advantage** and the 2<sup>nd</sup> application of AgriHance V provided a **4% yield advantage**. We are always seeking to provide real products to provide real answers for our customers.
