

Humihance Yield vs. Control

This trial was conducted to determine the effectiveness of Monty's Humihance versus a control plot.

Real Farm Research, located in Aurora, NE conducted this corn trial this 2018 season. The plots consisted on 4 rows, 47.5 ft long x 30 inches wide and replicated 4 times. Trial was irrigated by gravity and was planted at a population of 34,000 seeds/acre. Monty's Humihance was applied at a rate of 1 gallon per 2000 lbs. of urea, and control plot was given the same rate of urea without Humihance.

Monty's Plant Food Company conducts trials like this; testing our products to ensure that Monty's products are effective and the best in the industry. In this test ***Monty's Humihance provided a 15.5 bushel per acre advantage over the control plot.***
