2012 Tobacco Trial – Joe Raisor, Warsaw, Ky

Joe Raisor and his dad have grown tobacco for over 30 years -- mostly on the same farm. In the spring of 2012, Joe contacted Monty's Sales Reps about some yield robbing issues in his tobacco ground. After analyzing his soil tests and discussing his tobacco program, Monty's Reps recommended several products to try and overcome the issues he was up against.

Monty's products included Dri-Carbon™ in the fertilizer, Liquid Carbon™ and 8-16-8 in the setter water. Then a program of Agrihance®-V foliar product sprayed over the top at V4 and Layby. Then at sucker time he applied the Monty's 2-15-15 foliar product.

This tobacco season was the worst drought year he had ever experienced. Despite these drought conditions, the harvest results were 600 lbs higher than he had ever grown! Harvest results with Monty's line of products.
