

# Monty's® Liquid Carbon™

Proprietary, activated humic technology designed to maximize soil health

**Consistently  
Farmer  
Proven!**

Monty's Liquid Carbon is a soil conditioner designed to reduce soil compaction and improve overall soil health. It can be easily applied all year round, especially during pre-chemical application or burn down. Liquid Carbon enhances micronutrient uptake and breakdown of plant residue. Improve the health and vitality of your soil and maximize your yields with Monty's Liquid Carbon.

- ✓ Reduces soil compaction
- ✓ Improves overall soil health
- ✓ Easy application during burn down
- ✓ Enhances micronutrient uptake
- ✓ Enhances breakdown of plant residue
- ✓ Tank-mix flexibility for year-round use
- ✓ Available in 2.5, 30, 275 gallon – and bulk

### ACTIVE INGREDIENTS

Soil Amending Ingredients:

Organic Carbon .....	1%
Humic Acid .....	2%
Derived From: brown coal	

### APPLICATION INSTRUCTIONS

Apply at varying rates depending on purpose or desired result. For general soil conditioning, apply 2 quarts per acre directly to soil in fall and early spring. May also be applied at the same rate at pre-plant, planting, or for residue management. Apply 1 quart per acre when foliar applying with liquid nitrogen or other fertility products.

“ We could tell a huge difference in the treated and untreated area of that field the first year. We repeated the test the second year and were absolutely blown away. The corn was almost twice as tall and the yield was over 50 bushels more where we applied Monty's Carbon for just two years. ”

Ben Hushon, The Mill

The California method of testing humics. There are different methods for measuring humic substances, many of which include varying measurements of ash in with their humic reading. Although the California method can include ash in its humic reading, it is the method accepted by most states. This is the method Monty's uses to report its humic content. Ask your Monty's representative for more information.
