

Hay and Pastures

Maximize your livestock profits with Monty's® Liquid Carbon™ and Agrihance®

Record droughts have left many hayfields and pastures with less than ideal soil conditions. Monty's Liquid Carbon uses proprietary humic technology to improve soil quality and performance. As early as possible in the spring or early summer, apply 2 quarts per acre of Monty's Liquid Carbon to revitalize your soil for this year's growing season.

In addition to **revitalized soil**, an established root system is the key to maximizing your hay and grass production. You should soil test your fields and amend the soil accordingly, then apply Monty's Agrihance®-V (Vegetative) to **give your forage crops the nutrients they need**. This product – at 2 quarts per acre – can be combined with Monty's Liquid Carbon and any early season herbicide you may be utilizing. Don't waste the pass, if you're going to be spraying a herbicide, feed your grass at the same time.

A healthier more sustainable crop will result in higher TDN, RFV and protein levels, and more nutritional forage results in healthier livestock with better weight gain.

Field tests have shown that with the use of Monty's products, you increase your opportunities to **see more hay per cutting, especially on your second and third cuttings – and perhaps get that extra cutting late in the season.**

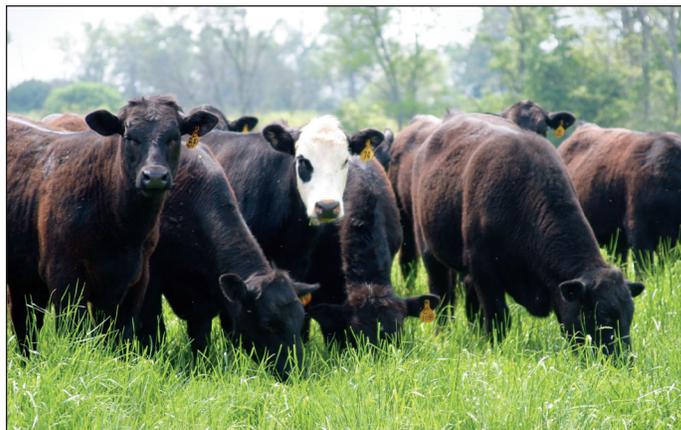

Farmers who use Monty's products report they are able to graze their pastures longer into the season before they have to start supplementing their cattle's diet with hay that is better saved for the winter months.

Monty's Liquid Carbon and Agrihance-V (Vegetative) are designed to give your forage crops what they need, when they need it – to withstand stress due to mid and late season drought. Maximize the potential of your hay fields and pastures this season by applying Monty's Plant and Soil Products.

After grazing on Monty's treated pastures, my cows were sold at auction for the highest price ever!

Terry Templin, Alabama

Try Agrihance®-V (Vegetative) and Monty's® Liquid Carbon™ on your pastures... the perfect combination to achieve robust hay fields and healthier herds!

Success you can see™
