

Do You Want High Performance Soil?

Monty's offers activated humic technology engineered to help make your soils healthier ... and maximize yields!

Monty's Liquid Carbon™ helps rebuild your soil by:

- Enhancing micronutrient uptake
- Converting organic matter
- Boosting water-holding capacity
- Reducing soil compaction
- Improving the overall health of your soil

Treat your soil this season with Monty's Liquid Carbon for healthier soil and maximized yields!

Monty's Liquid Carbon applications:

- Apply 1 to 2 quarts with Liquid Nitrogen whenever top-dressing wheat to reduce burn
- Apply 2 quarts per acre with burn down applications
- Apply 2 quarts per acre with any starter fertilizer program (in row or 2x2)
- Apply 1 quart per acre with any foliar applied nutrient products - Monty's products or others
- Apply 1 quart per acre with 1 to 2 quarts of Monty's Microhance™

“

I use Monty's Liquid Carbon more than anything else. It really works. I would recommend Monty's products to any farmer on any field in any conditions. Liquid Carbon helps aerate the soil and helps in compaction areas. Until you try it on your farm, you are not going to know the benefits.

RAY TUCKER, PROGRESSIVE FARMER
