

INTRODUCING DRIVAS™

The Power of True Fulvics

Looking to maximize your nutrient applications this season? Monty's Drivas, our new true fulvic, is designed to drive more nutrients to the plant when they need them. And more nutrients mean a healthier crop and a higher ROI for you this season.

Consider the benefits of Drivas:

- Features Monty's proprietary fulvics
- Pure fulvics mean more nutrient driving power
- Designed to significantly enhance nutrient uptake into the plant
- Works as chelator of nutrients, thus increasing the nutrient's bioavailability
- Supports plant growth and flowering
- Amber color won't discolor your mixture
- Foliar apply with liquid nutrients, herbicides, fungicides, and insecticides
- Tank-mix flexible regardless of pH

Ask a Monty's representative how Drivas can help maximize your yields this season. Healthier crops mean higher ROI!

Available in 2.5, 30, 275 gallon—and bulk sizes. Please check with your dealer for availability and application rates or visit www.montysplantfood.com. Not available in all states.

What differentiates Monty's fulvics from the competition?

Monty's Drivas is a true fulvic derived from ancient humified material (lignite). Some competitors use processed plant materials or manufacturing by-products which are less pure and less bioactive.

Some competitors claim a higher percentage of fulvics. But if their product is not a true fulvic, whatever percentage they claim does not matter. Some manufacturers use different methods for determining fulvic content. Monty's uses the HPTA® Method. When comparing products, be sure to compare products using the same method of analysis. A higher percentage does not always mean better!

Active Ingredients:

Fulvic Acids 0.7%
Derived from Lignite

Application Rates:

General: Foliar apply at a rate of 1-2 quarts per acre. Drivas may be mixed with any grade of liquid fertilizer. Consult your local dealer for recommended rates for your particular region, soil type, fertilizer type and grade, and specific usage. **High Yield:** Apply in-furrow, 2x2, or Y-drop at a rate of 1-2 gallons per acre. Monty's high yield program can vary for crops, application rates and timing. If you are interested in a high yield program, contact your Monty's representative.
